

# DRONE THREAT READY

Department 13 delivers drone detection and counter-drone solutions to protect people and infrastructure.

Our approach is to provide flexible and scalable solutions, revealing the hidden drone threat and enabling effective and safe counter-actions. Our products are currently protecting sites and people around the globe.

# SUPPORTING THE SAFETY AND SECURITY OF PEOPLE, ASSETS AND INFRASTRUCTURE

Department 13 offers a comprehensive suite of detection and counter-drone solutions, ensuring scalable protection from unauthorised drones.

## Drone Detection

Our technology provides users with the ability to track drones in real-time to provide situational awareness in airspace over an area of interest. Our sensors can be deployed in mobile or fixed locations, as a single system or as a network of sensors.

## Counter-Drone

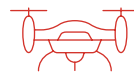

Our products can mitigate threats and control drones, allowing users to fend off or land drones immediately. This enables users to counter the threat of unauthorised or malicious drones without affecting people or assets on the ground, minimising collateral damage.

## INDUSTRIES

### Defence

Our products can be used in a range of domestic and frontline military operations in force protection or counter-reconnaissance roles. Our products are being used globally in security applications to protect military bases and installations.

### Airspace Safety

Preventing the use of drones within controlled airspace minimises the risk of disruption of air operations and improves safety of people, assets and cargo.

### Law Enforcement

Our products are ideally suited to the protection of the public when used within no-fly zones, mass gathering events or areas of high public activity.

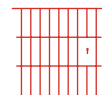

### Sensitive Site Protection

Whether it be a military base, sensitive government facilities, national icon or a diplomatic embassy, our products preserve the security of sensitive sites to protect people and infrastructure.

### Emergency Services

The protection of emergency services from drones during crisis response ensures the uninterrupted continuation of services. For example, our products can support the continuity of fire-bombing during bushfire relief.

### Correctional Facilities

With an ever-increasing number of drone-related security incidents around prisons and correctional facilities, our counter-drone technology is essential in the fight against contraband.

### Critical Infrastructure

Infrastructure crucial to people's way of life is subject to the threat of rogue drones. Our systems are being used to protect volatile resource processing facilities, major transportation networks and airports throughout the world.

Drone Threat Ready.
